

HOW TO WATER WITH MIOBIO

In order to learn how to use MiobiO's automated irrigation cycles please follow the advice in the charts below:

DOWNLOAD IRRIGATION MANUAL

Given that each plant has its own characteristics, in the case where you observe that the potting soil is too moist or not moist enough, you can turn up the irrigation by selecting the higher or lower irrigation levels of the suggested indicative parameters.

Therefore we suggest you check the level of soil humidity with your finger every now and then. Generally plants need moist soil, but never soil that is overflowed.

In the case where your plants are too tall, set the irrigation at the maximum level. However, if you feel that the soil is still not moist enough, especially at a room temperature over 25°C, we suggest you water by hand.

Type of plant	Irrigation cycle advisable for room temperature 18 – 24 °C	Irrigation cycle advisable for room temperature above 25 °C
Lettuce, rocket, spinach, red chicory, onions, strawberries, flowers and ...other similar plants	Irrigation cycle 9 days	Irrigation cycle 6 days
Mediterranean herbs of small dimensions, basil, thyme, oregano, sage, rosemary, mint and... other similar plants	Irrigation cycle 9 days	Irrigation cycle 6 days
